Learn all about Miele products for your next home project

Miele Appliances
Overview

Miele is the largest family owned appliance company in the world. They're one of the most vertically integrated companies in the industry meaning that their products are primarily designed, manufactured and assembled locally. For example, the only components they don't manufacture in their dishwashers are the rollers under the racks.

The obsession with quality translates into the fewest repairs in the industry. We identified Miele as the most reliable brand in a recent blog post.

Miele is most known for cleaning appliances like dishwashers and laundry. Their MasterChef wall oven with preprogrammed recipes has become another popular product as well.

What's New?

Knock-2-Open Dishwasher

This is a cute novelty, but has its place if you are paneling your dishwasher. Simply knock twice and it will open. You do not need any cabinet hardware.

Induction Cooktop

Induction is already the fastest form of cooking. It is faster than the most powerful professional gas with better simmer. It is also the most child safe and easier to vent than gas.

This new Miele has a 7,500 watt burner, which is about 50% faster than the current most powerful of 5,000 watt. This unit will be incredibly fast.

PROFESSIONAL RANGES

Miele has introduced pro cooking to complete their kitchen offerings

Professional Ranges

Miele recently introduced a line of professional ranges in 30", 36" and 48". They're offered in gas, self-cleaning or dual fuel with electric convection. Highlights include 19,500 BTU burners and twin convection for more even heat.

It's the most cleanable range with dishwasher safe racks designed to be left in a self-cleaning cycle.

New Miele 48" Pro Range

Professional Ranges

They have two different sets of controls. The gas, self-cleaning models have regular digital controls. The dual fuel models offer programmed cooking modes with automatic cooking and an interface like your phone.

This is the first range offering functionality and technology in a pro range. You also have a steam assist function for making breads.

Electric + Induction Ranges

Controls are very similar to the professional range. Electric has the regular controls. Induction has the touch controls and steam assist. Both ovens offer twin convection.

DISHWASHERS

Miele dishwashers are known for their quality

Dishwashers

Miele is probably the best dishwasher in the world for reliability as 96.8% of all the parts are made by Miele. As you step up, the dishwashers change levels of quietness, cycles and drying.

Miele is the only dishwasher with an active drying system. We will describe each dishwasher and the differences.

Miele Dishwashers

Features

Max Water Usage:

Maximum 5.5 gallons, but can be as little as 2.9 gallons, exceeding EnergyStar standards by 35%.

Quietness:

Decibel ratings are now under 40 dBA for their better models. (A whisper is 15 dBA and a normal conversation is 60 dBA)

Classic and Crystal Series

Clean Air Dry

There is a fan underneath the toe-kick on the right hand side of the dishwasher that draws the room air on the outside of the right wall of the dishwasher (no air infiltrates into the actual tub, air cools the right wall).

Hot air from inside the tub is drawn to the cool wall, condensation forms and steam is dissipated.

Rated at 46 dBA on both models with the difference being a China cycle on the crystal model.

Miele dishwashers start at \$899 (after rebates).

Dimension Series

Sensor Dry

In conjunction with the Clean Air Dry there is a room temperature sensor. If the room temperature is warm, the machine will adjust the amount of rinse aid dispensed, final rinse temp and final drying time to achieve better drying results.

Rated at 44 dBA.

Diamond Series

Drying Plus

In addition to the Sensor Dry, there is a second fan pushing air towards the cooler wall.

A tighter seal allows the dishwasher to pop open at the end of the cycle to release additional moisture. It's very effective on plastics.

The Diamond series has 16 cycles for almost any type of dish and is rated at 37 dBA.

WALL OVENS

New introductions have pushed the envelope on automated cooking

Miele Appliances
Wall Ovens

The Miele wall oven still sets the standard for controls and cooking flexibility. The oven is pre-programmed with an array of simple to use options to ensure perfect cooking.

As we said before, the new oven includes steam assist and more control features.

**New Miele M Series
Wall Ovens**

Features

Residual Heat Utilization

Oven switches off when 15% of cooking time is left, and uses residual heat to complete the cooking cycle.

AutoRoast

Using the meat probe, the oven automatically cycles to 450 degrees which seals in the juices. The oven then automatically adjusts to the preset temperature.

Rapid Heat Up

By using all the elements, the Miele oven will reach 350 degrees in 10 minutes or less.

Self-Clean

Determines the cleaning time by sensing the amount of residue in the oven.

Wall Ovens

Speed Ovens

Miele employs a convection oven with a microwave assist. Food is prepared much faster with the flavor and food texture of a convection oven.

**Speed and Steam
Oven Buying Guide**

Steam Ovens

Miele has always had a steam oven. The combi-steam adds oven functionality, so you can cook as a regular oven as well. It can also be plumbed so you don't have to refill with water.

Steam is the best way to cook as it adds moisture and won't bake out the nutrients. It excels at refreshing leftovers.

All Miele steam products have programmed controls and are easy to operate.

You can now plumb the new Miele M series ovens for steam. It's a good function, especially for bread. The outer crust is crispy due to the steam.

LAUNDRY

Miele laundry has unique features to protect your clothes

Miele Appliances

Laundry

Miele is the best laundry in the world. Intuitive controls and a revolutionary honeycomb drum guarantees even silks will be washed properly without damage to the material.

You spend a lot of money on your clothes. Miele's honeycomb drum design will best preserve them. Because the perforations in the drum allow the clothes to wash on the pool of water and not touch the metal, there will be less wear and tear during the wash.

Features

Load Sensor

Adds or subtracts water based on load weight as well as water absorption rate. Miele will sense the difference between 10 pounds of socks and 10 pounds of silks and eliminate excess water.

Ramping Rhythms

Miele will alter the spin direction based on fabric, not the cycle.

Honeycomb Drum

The clothes will never touch the drum during the wash. The fabrics are cushioned by a layer of water by the honeycomb design. Clothes last up to 4 times longer in a Miele compared to other machines.

REFRIGERATION

.....
Integrated style for your kitchen including all fridge or all freezer options

Refrigeration

Miele introduced refrigeration to the U.S. market 6 years ago. Unlike the rest of their products, Miele's refrigerator is manufactured in Bosch's Turkish plant.

Miele has the same box as Thermador, but features better lights and controls.

It's integrated and fits seamlessly within a 24" cabinet. It's available in 30" and 36" widths.

HOW TO BUY

How to choose the right Miele products for your project

How to Buy

Miele is a great brand with distinctive styling and unsurpassed reliability. Their technology is easy to learn.

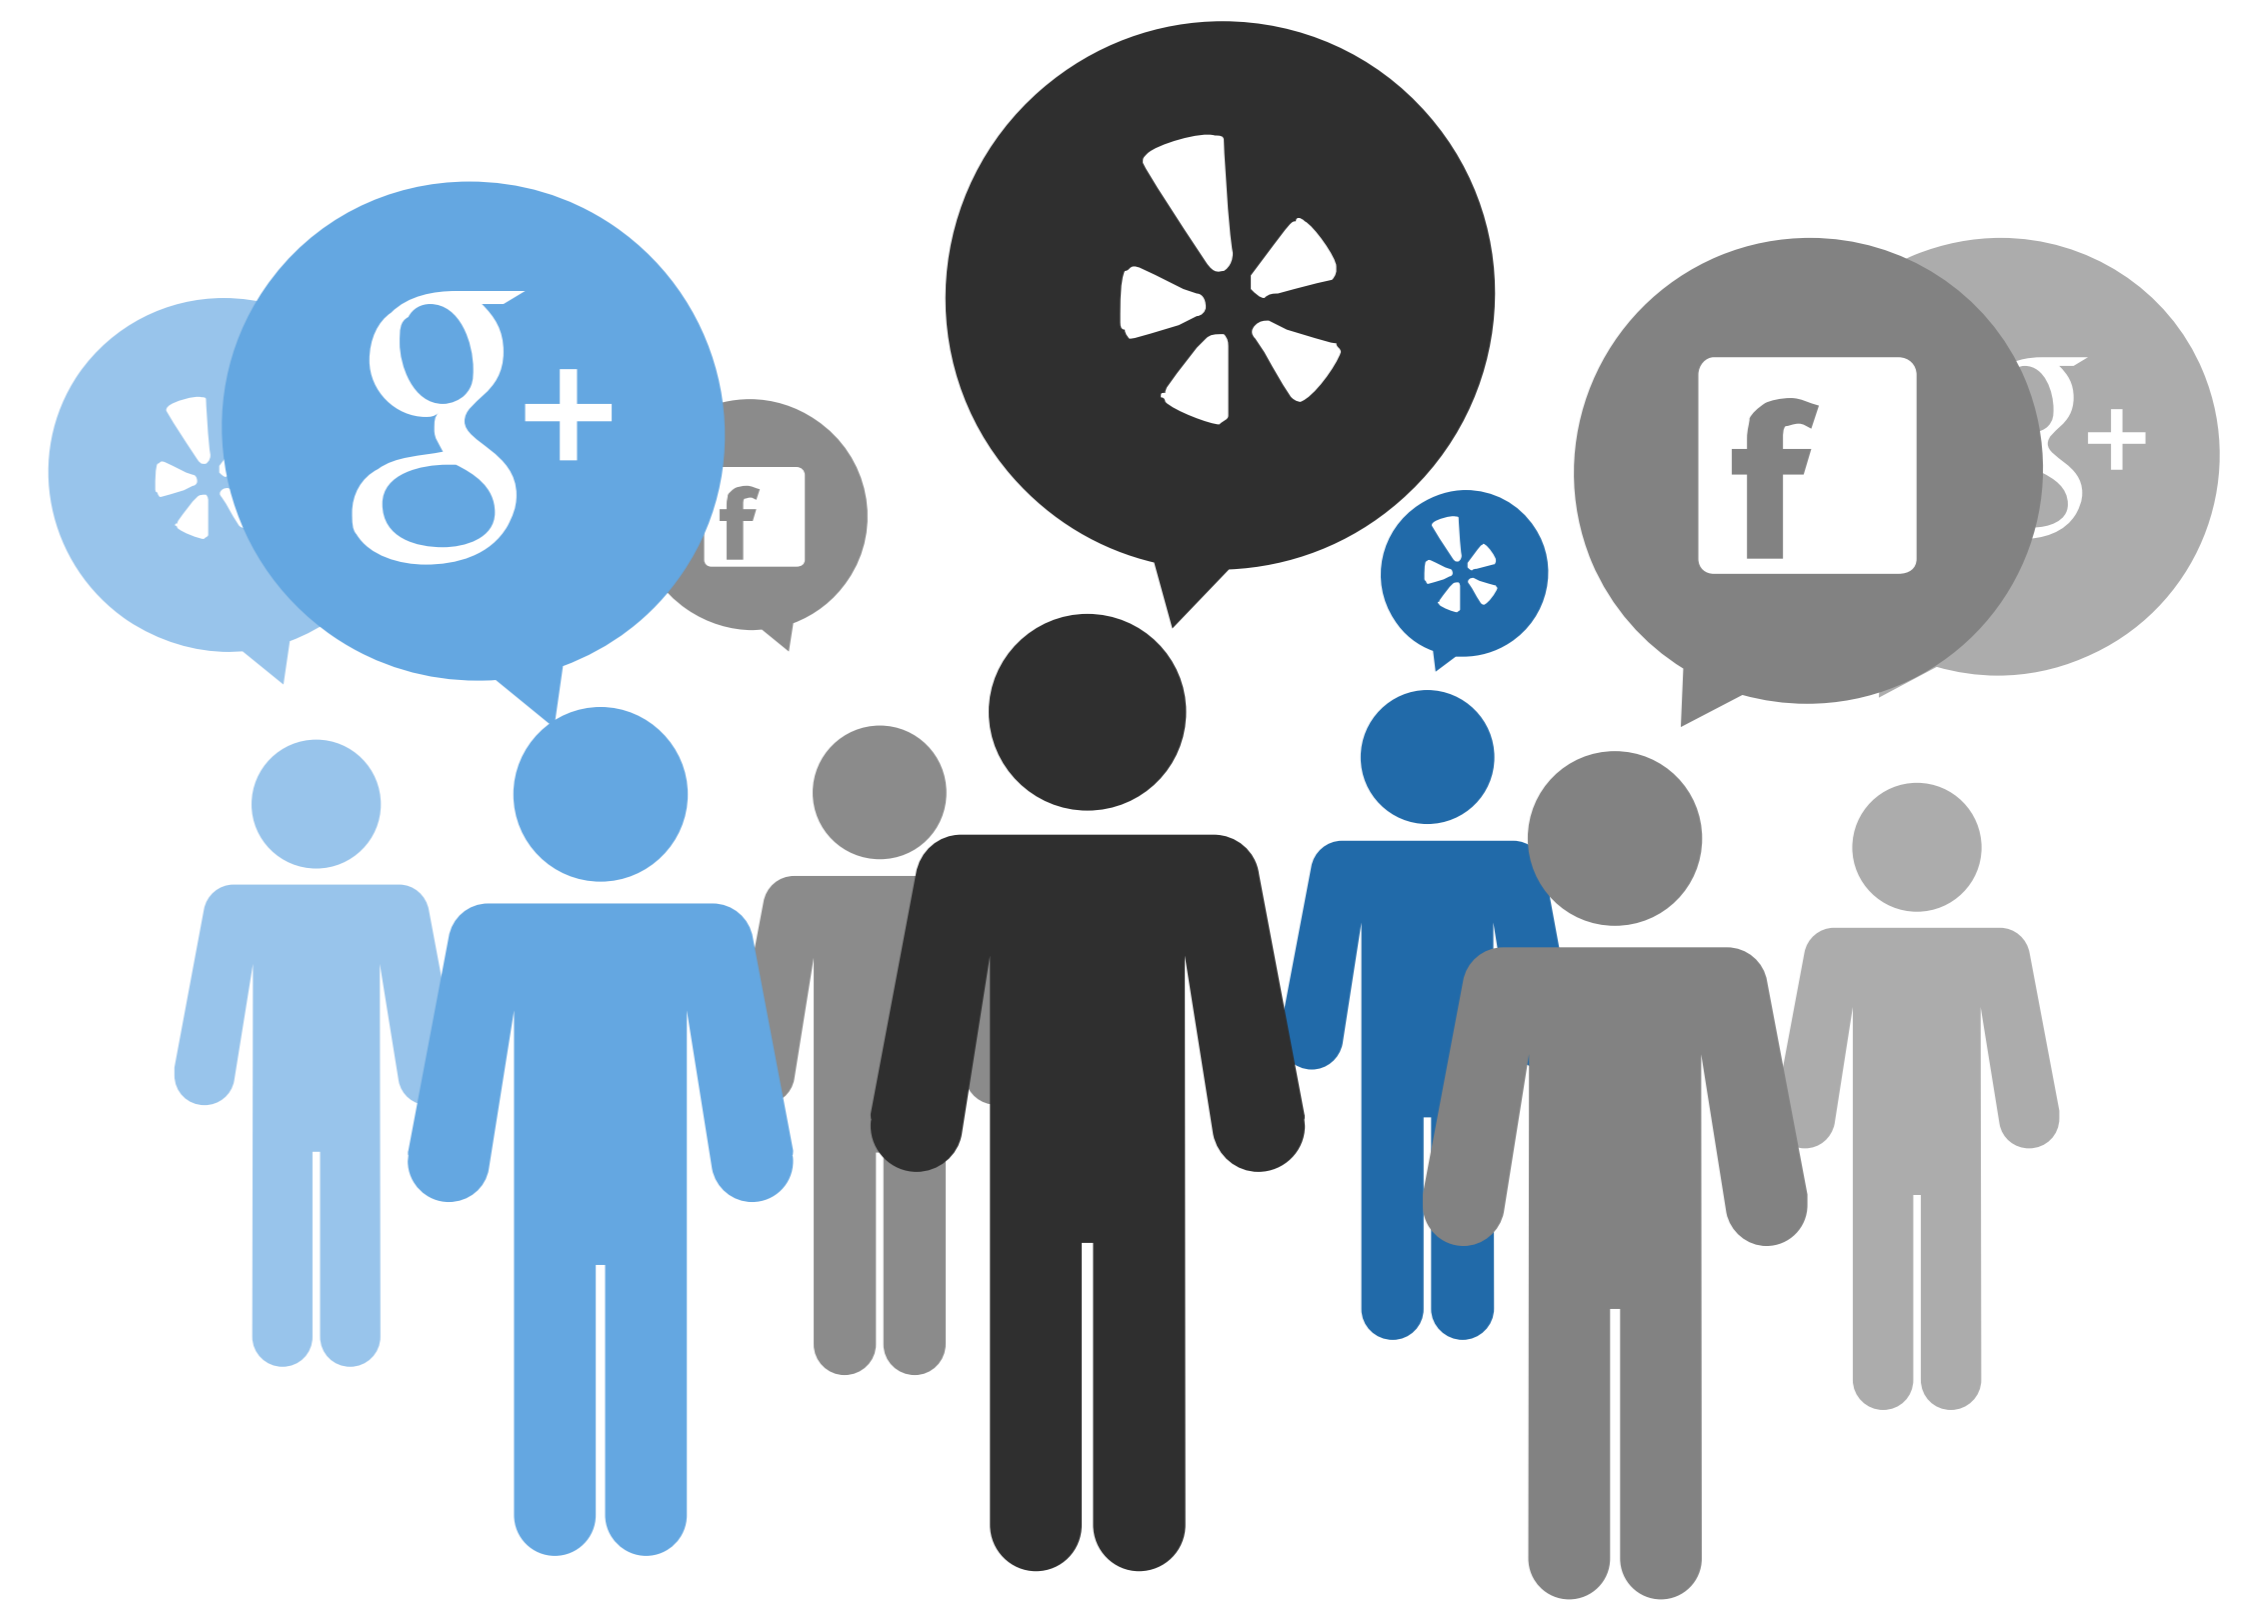

If you're planning a new kitchen, look at some of their new professional ranges and especially steam. It's the best way to cook and Miele makes it functional.

Wisdom of Crowds
●●●●●

Buy where you're comfortable

There are tons of stores and products, but a limited number of consumers. Check review sites like Yelp, CitySearch, Google and the Better Business Bureau before you purchase.

Remember, any store can sell an appliance; the biggest issues are shipping and service.
